

Infor10 ERP Business (SyteLine) System Functionality

Core Functionality

☐ Attach text documents or spreadsheets to

Technology		individual records in any collection			
			Right click menu for adding forms or workspaces		
	100% Microsoft .NET technology	Administration			
	Supports Microsoft Windows 7 (8.01.10 and up)	Administration			
	Supports Microsoft Window Server 2008 R2		Description of Comment would be a comment would be a		
	MS-SQL 2008 R2		Password Security – Cannot reuse password for		
	Microsoft Office 2007 Integration		next x number of times		
	Microsoft Office 2010 Integration		Security by user, group and site		
	SharePoint 2010		Security for multiple sites can be created and		
	Projects 2010		managed from a master site		
	Infor10 Workspace 10.1 and UI Blue 2.0 (8.03)		Create tasks for other users		
	Embedded BI from within Infor10 Workspace		Form and field level security		
	Infor10 ION		Data-level security		
	Supports XP & Vista clients		Data access security		
	One-click client install		Electronic Signature		
	Web client (IE8, IE9, Firefox, Chrome, Safari)		Licensing by session type		
	Zero maintenance client		Middleware access security		
	Event management/workflow		Multi-language		
	Highly configurable/customizable without source		SOX compliant password management		
	User events and configurations survive upgrades		Printer output management		
	Full toolset provided to develop custom screens,		User Session Management – Orphans		
	adding applications and business logic		System Administrator Home form to allow quick		
			access to key system administration data

Additional Functionality

SyteLine Data Collection

- ☐ Integrated Data Collection supports all three types of commonly used collection methodology: Store & Forward, Wedge, and Radio Frequency.
- ☐ Store & Forward uses portable readers and scanners that capture and store information until the reader is placed back in its cradle, at which time it transmits contents in batch mode.
- Wedge data collection uses a reader attached to the PC keyboard to enter data which is immediately validated and checked for errors, and then directly posted to the database.
- ☐ The RF method offers the ability to enter data and scan transactions through the use of portable radio frequency equipment. It provides on-line, real-time validation of the Wedge method with the portability of the Store & Forward method.
- For Inventory Control: Cycle Counting, Physical Inventory, Material Movements.
- ☐ For Time & Attendance: Clock In/Clock Out, Lunch In/Lunch Out.
- For Manufacturing Control: Labor and machine reporting against jobs and production schedules, with moves, completions and scrap (including reason codes).
- ☐ Style sheets have been developed for the 1/4 VGA screen, 240 pixel wide Intermex CK31 device

SyteLine Configurator

- ☐ Advanced constraint and rules based order and product configuration
- Ability to tailor and configure customer orders within a graphical, interactive order environment.
- ☐ Integrates features & options <u>and</u> intelligent rules enabling order entry to take complex orders correctly every time.
- ☐ Ability to configure a quote, an order, an order line or a job
- Performs calculations, text processing, and rules inheritance
- ☐ Multi-level configuration capability
- ☐ Ability to support intelligent part numbers
- ☐ Will intelligently generate BOM and Routing and pricing
- ☐ Flow chart graphical constraint development
- ☐ Save configurations

SyteLine APS - Finite Capacity

- ☐ Advanced Planning System with Finite Capacity Planning
- Allows manufacturers to make firm commitments on customer orders, quotes, project resources, MPS items and forecasts in real-time.
- Simultaneously plans material, labor, tools, and the machinery required for each customer order at the time the order is entered.
- ☐ Immediate real-time Capable-to-Promise dates, not just Available to Promise.
- ☐ Launch Control.
- ☐ Upon placing an order, ability to determine why late and bottlenecks throughout entire product structure
- What-If simulation with ability to compare/copy multiple alternatives.

Infor ERP Storefront

- ☐ Business-to-business
- ☐ Shopping cart
- ☐ Electronic Checkout

SyteLine Forecasting

- Creates forecasts from historical trend or from collaboration with customers or salespeople.
- Analyzes, graphs forecasts vs. history and trends, by item or item groups.
- Statistically calculates Item Safety Stock (ROP) and Order Minimum (EOQ Lot Size) and sets slow moving flag.
- Updates MRP/APS plan based on allowable percentage changes during specified time fences.
- ☐ Monitors the forecasts vs. actual demand and generates exception alerts.

	Provides market trend analysis with flexible		Project/fixed billing option
_	period-to-period comparisons and graphing.		Service/extended warranty contracts
	Generates budget reports for revenue, material		Automatic contract renewal
_	and labor based on the forecast.		Long term rental support
	Supports reorder point forecasting, application of		As-is configuration
_			As-built configuration
	statistical models to forecast sales or usage, group		9
	forecasting, roll-up of expected demand and		As-shipped configuration
	planning BOM forecasting based on historical		As-repaired configuration
_	usage percentages.		Multi-level bill of materials support
	Supports the following forecasting models:		Equipment meter
	moving average, horizontal with exponential		Where used reporting
	smoothing, lumpy, trend, seasonal, trend-		Any level serial number/lot number/revision
	seasonal, user defined models and automatic		control
	model selection based on best fit to historical		Service history
	behavior.		Multi-tiered/multiple warranty support
			Consumer registration history
ما ام	Credit Card Madula		Expense approval
eLine	e Credit Card Module		Expense reconciliation
	m 1 1 1 1 1 1 1		Expense reimbursement
	Take credit cards as payment on individual		Transaction variance reporting
_	customer orders during order entry.		Tiered and flat-rate labor pricing
	On line authorization		Unified transaction entry (material/labor/T&E)
	On line funds capture		Receiving and shipping direct from SRO
	Fully secure, secondary database for CC info		Shipment paperwork
	Orders placed on credit hold with de-		Data collection support
	authorization	_	Margin analysis by equipment, customer, SRO
	Payment auto applied to invoice		
_	Payment auto-applied to invoice		
	Allows for manual re-authorization		Direct expense or WIP capability
